

COMPANY PROFILE

Soilmec was established in 1969 and today it is one of the major companies in the field of design, production and sale/marketing of equipment and rigs for drilling and foundation works.

It counts on a wide range of products, among the most complete in the world, so that it can cover any requirements of works and sites. Bridges, viaducts, electric power plants, dams, ports, motorways, metro and railways, geothermie and small diameter drilling. . . .

Soilmec can satisfy any request and need, also the most complex and articulated ones. This is the result of a widespread and rooted company culture which has always focused on the customer and relevant requirements as the real centre of all its activities, according to a true idea of partnership.

Soilmec belongs to the Trevi Group, which is among the main leaders worldwide in the field of special foundations. And it is also thanks to **the synergy and the interaction among engineering and experience on the field that the rigs produced by Soilmec are available on the market after an accurate and concrete site testing phase**, hence capable of supplying successful and reliable performances, also in case of innovative technologies.

Innovation as growth's engine.

In few words, this is the cultural approach which has always characterized the whole Soilmec activity since its very beginning. Innovation of process, market, communication... but especially of product, in order to supply the client with more and more technologies which are always updated and advanced as for performances, quality, reliability and safety.

The real pulsing core of Soilmec is just the Research & Development Centre, mechanical engineers and designers who are wholly dedicated to the never-ceasing development of new technologies and solutions that are client-targeted.

Soilmec's range includes:

- **SR Line** – (Multipurpose) Hydraulic drilling rig
- **SF Line** – Continuous Flight Auger dedicated rig
- **SM Line** – Hydraulic Microdrilling rig
- **ST Line** – Tunnel dedicated rig
- **SC Line** – Heavy Duty crawler crane
- **Tiger & Cougar** – Hydromill
- **E Tech** – The brand new electric line
- Ancillaries & Tools

Soilmec is currently active in over 70 countries, with a network of subsidiaries, agents and dealers who guarantee the clients a continuous technical and financial support as well as an after-sale service. The will to be "closer and closer" to the client, also geographically, is one of the main principles inspiring the daily work of over 600 employees of the company.

The success of the Trevi Group is based on the integration and therefore on the continuous exchange between technological and process innovation of the two divisions making up the Group: the Trevi division and the Soilmec division (which designs, manufactures and markets machinery and systems for subsoil engineering).

The holding (Trevi-Finanziaria Industriale S.p.A.) has been listed on the Milan stock exchange since July 1999 in the Euronext market.
